Mandatory Provision of Recycling Service through Hauler Permitting/Licensing

Many counties and municipalities use hauler permitting or licensing programs to enhance the recycling infrastructure and access to recycling, while still allowing for multiple haulers to service their jurisdiction. Historically, hauler permitting and licensing programs have been used to ensure that:

- Haulers are properly insured and bonded;
- · Collection vehicles and commercial containers are properly maintained; and
- Haulers follow guidelines regarding allowable hours of collection.

In some communities, hauler licensing/permitting ordinances are also implemented to ensure that haulers providing trash collection services also collect recyclable materials. In most cases, ordinances state that recycling services must be provided "at no additional cost" to the resident – essentially requiring the hauler to "bundle" the services under one service fee. The provisions of the ordinance enable the jurisdiction to have some control over service, despite not providing service directly or having a contract/franchise agreement with the hauler(s). This can be especially beneficial in communities with subscription service.

HOW DO "BUNDLED SERVICES" ORDINANCES VARY?

- May apply to single-family dwellings, multi-family dwellings, and commercial/institutional customers.
- May stipulate specific service provisions such as:
 - Materials to be included in the recycling programs;
 - Where recyclables are to be delivered;
 - + The manner in which materials are to be collected (e.g., "single-stream");
 - + Minimum frequency of collection (usually weekly or bi-weekly);
 - + Collection of recyclables and trash on the same day;
 - + Curbside service;
 - + Yard debris or organics collection (sometimes at an additional fee); and
 - Collection of bulky items (sometimes at an additional fee).
- May specify container types/size/recycled content, or that hauler provides containers.
- May require the payment of a licensing fee to cover the administrative cost of implementing the program (often a per-vehicle fee or a flat fee per company plus a per-vehicle fee).
- May require specific reporting.
- May require haulers to develop/distribute education and outreach materials, inform residents (or new residents) of recycling options.
- May allow services to be provided through a subcontractor/agent.
- May set rates or rate structure such as requiring "Pay As You Throw" (PAYT) user fee structure, and may stipulate pricing differentials and/or option of a "mini can" or small cart.
- May require reduced fees for eligible elderly or low-income customers.

BENEFITS OF APPROACH

- Allows for the existence of multiple haulers to serve the community, which may be politically more acceptable than municipally managed collection, and may support industry competition in the long run.
- Increases participation in recycling program and results in higher recycling rates over subscription recycling service, as residents automatically receive service and may even pay less (or at least not more) if they recycle.
- Enhances cost effectiveness of recycling through improved economies of scale.
- Can provide for some level of consistency of service throughout the jurisdiction, which limits confusion about what can be recycled and how to prepare materials.
- Ensures availability of desired data to local government.
- Implementable in small or large communities, rural or urban.
- May allow for the use of a subcontractor if trash hauler lacks ability/equipment to provide certain services (e.g., organics collection).
- Ordinance may include penalties to encourage compliance.
- Can allow for additional requirements as infrastructure develops.
- Can provide for exceptions as needed, such as:
 - + Multi-family dwellings that lack adequate space for recycling; and
 - + Exemption from collecting certain materials if no market exists.

BEST PRACTICES

- If recycling carts are used, they are provided to all residents or have them "opt out" in advance of distribution, rather than requiring them to sign up for the service (the default is inclusion).
- For consistency, community develops education and outreach materials and has haulers distribute them. Efforts are
 made to harmonize messages with surrounding communities supplying recyclable materials to the same materials
 recovery facility (MRF).
- Reporting requirements for haulers consider those of surrounding communities and are developed with hauler/facility input.
- Other policies that enhance recycling are also considered as part of the program, such as PAYT, mandatory recycling
 of certain materials, universal recycling, building code requirements to ensure new multi-family units/commercial
 buildings have adequate space allocated for recycling containers, and disposal bans.

Mandatory Provision of Service Haulers serving specific types of customers must provide recycling services.

Universal Service

Wherever trash collection is provided, collection of recyclables must also be provided. This includes residential, commercial, and public settings, including events.

EXAMPLES OF JURISDICTIONS THAT REQUIRE RECYCLING SERVICES THROUGH HAULER PERMITS/LICENSES

Examples of some communities that have required haulers to provide specified recycling services (typically at no additional cost to the customer) are provided in the table below. Two states, Vermont and Delaware, have also mandated bundling of services, in combination with other policies.

Population Pop	Community	Selected Program Elements
